
Technical Outcome(September - October)

The purpose of this stage：

1. Discuss recent results with your mentor
2. Unity AR tagging
3. Test unity AR
4. Display of final results

4.1 Two-segment video

4.2 Unity AR results

10.20 meeting

Relationship between woman body and food

why

most food disorder problem happened on woman

For myself

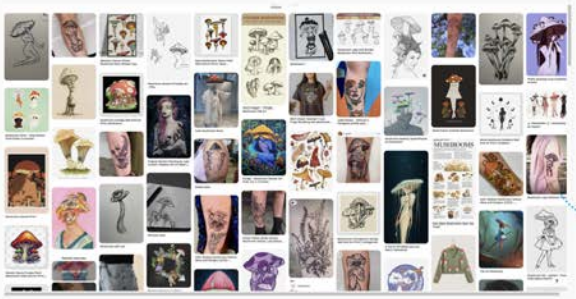
The Asian social environment itself loves —— White young and thin

Against naturalness

hate the food

The fact that women strive to conform to the shape that society as a whole needs them to maintain is actually the shape that requires women's bodies to be represented under patriarchal scrutiny

The relationship between women's body and food itself implies the relationship between women in a patriarchal society (male scrutiny) – the eater and the eaten



Theory

Theory:

Title: Disciplined mushrooms

Background:

The relationship between the female body and food:
It has been reported that the symptoms of eating disorders occur in women, and women are always inextricably linked to food, and the words feminine and famine present these two tight states

My experience:
In high school, there was a period of low self-esteem, fasting and dieting, and there was a period of special attention to the calorie index value of food, resulting in a tendency to anorexia now.

Purpose of the project:
The author insists on taking an ecofeminist position, discussing the health imbalance of eating disorders among women, criticizing the female body under the patriarchal gaze, and women's aversion to food in the process, and ultimately natural food waste and consumption, the author hopes to convey the natural value that society should liberate the female body and respect natural (the naturalness of the female body itself and the protection of natural resources).

symbol

The sign:

Mushrooms? ? ? ? → A figurative metaphor

1. My experience:
In the stage when I used to suffer from an eating disorder, my mother learned from others that a Chinese remedy can solve the problem of diet by eating mushrooms, because mushrooms can help digestion, so I can't do without mushrooms every time I eat food throughout the stage

2. The mushroom image:
The image of the mushroom often matches the female body

3. The natural feminism revealed on the mushroom deconstructs the original dualism

4. some mushroom cause sexual desire
In the smell of this mushroom, there are certain important ingredients that easily cause sexual desire. Our results show that the volatile components of this mushroom spore contain a hormone-like chemical that bears some resemblance to the neurotransmitters secreted by humans during sexual intercourse

Reference: Final outcome

Mushroom Image

Mushroom with woman

Imagination

My scene 👇

What is my installation look like? ? ? ? 👈

Drawing the sketch

Keywords: healing, nature, mushroom, horror, being monitored, crashing, powerlessness

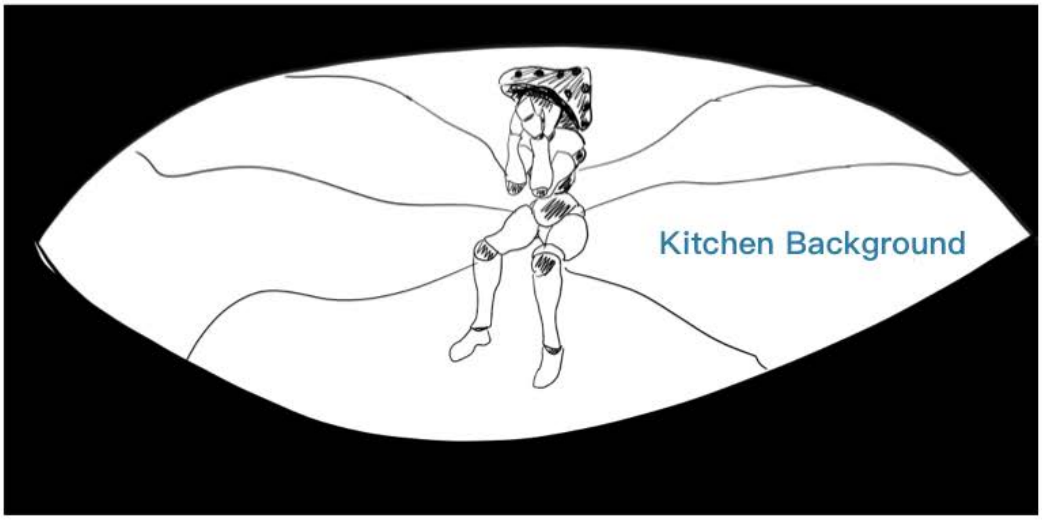
Natural Background

Description :

Imagination of a mushroom woman in therapy

in the hosptial?

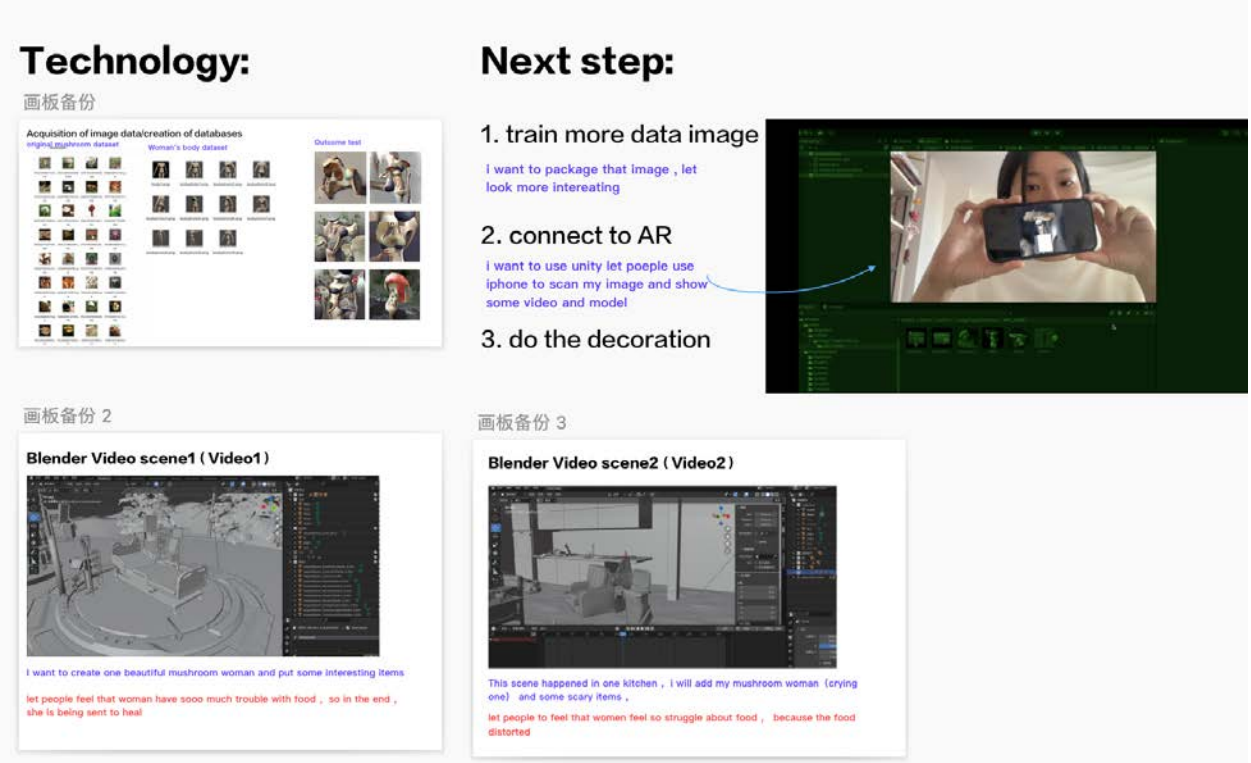
Some therapeutic appliances, hospital beds, hospital lights, a natural environment



Description :

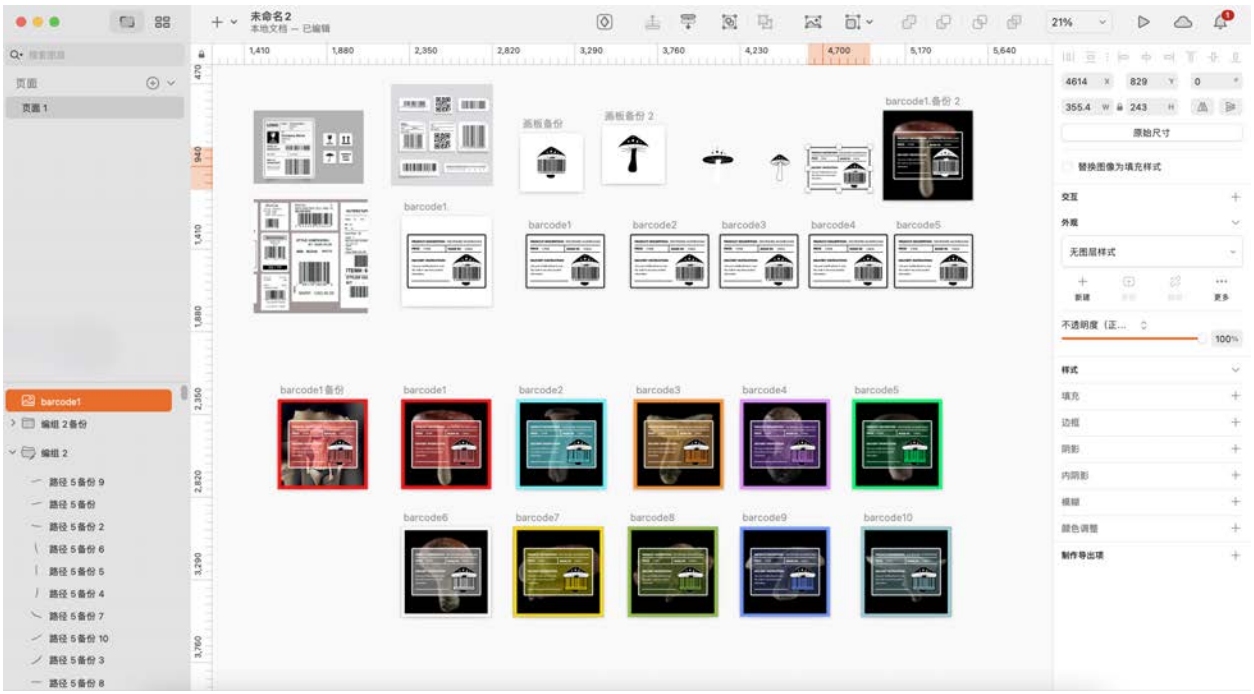
Imagination of a mushroom woman in kitchen

Being watched by other people, struggling with food, crying and shaking the head to express uneasiness and discomfort, I wanted to make the scene more terrifying



2.Unity AR tagging

I have created some AR target image on the sketch



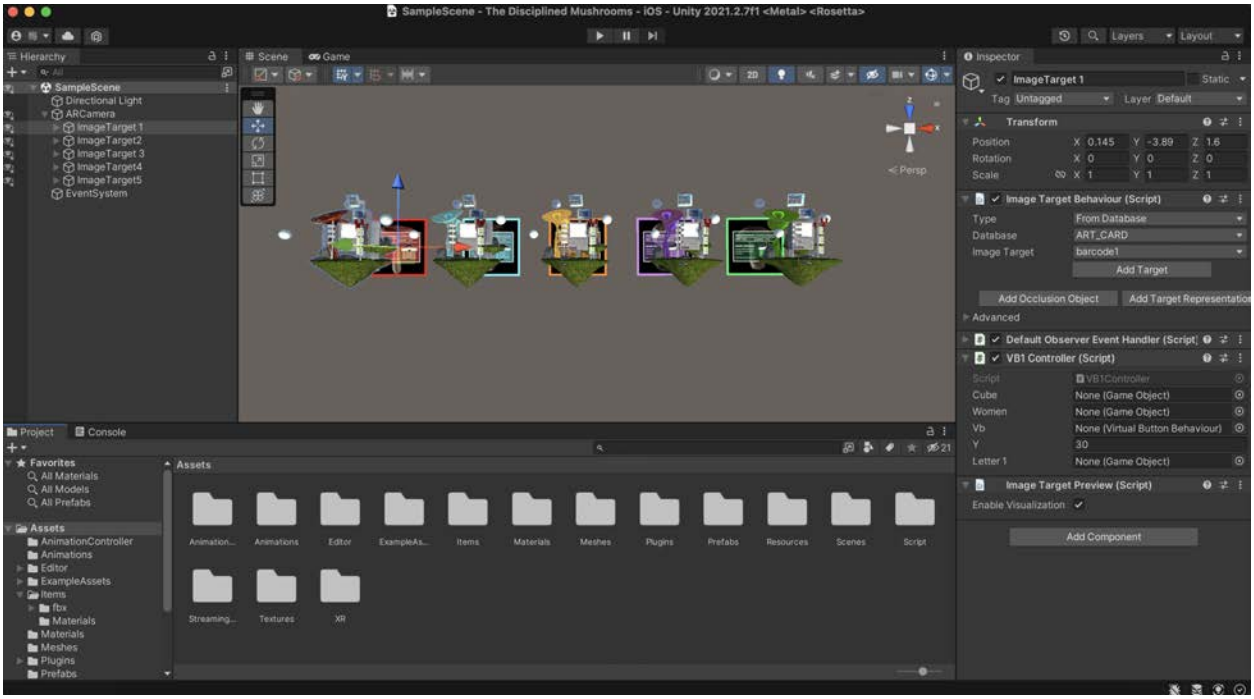
I also test the unity AR, i want to see if it can work

3.Test unity AR

I need let my machine learning video run on unity after i scan, so i found this tutorial video

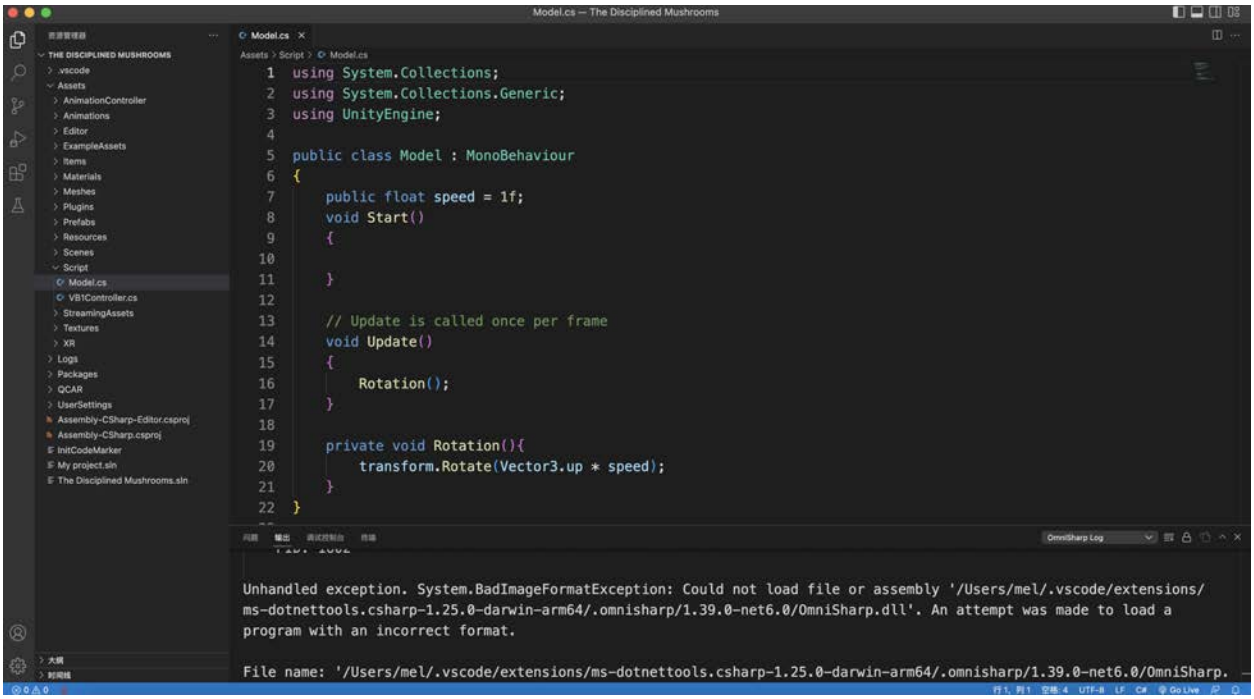
https://www.youtube.com/watch?v=3K5_6oySo1U

I want make it more interesting 😊， then i put almost five AR target item, so user can scan different target image then have different results on the phone.



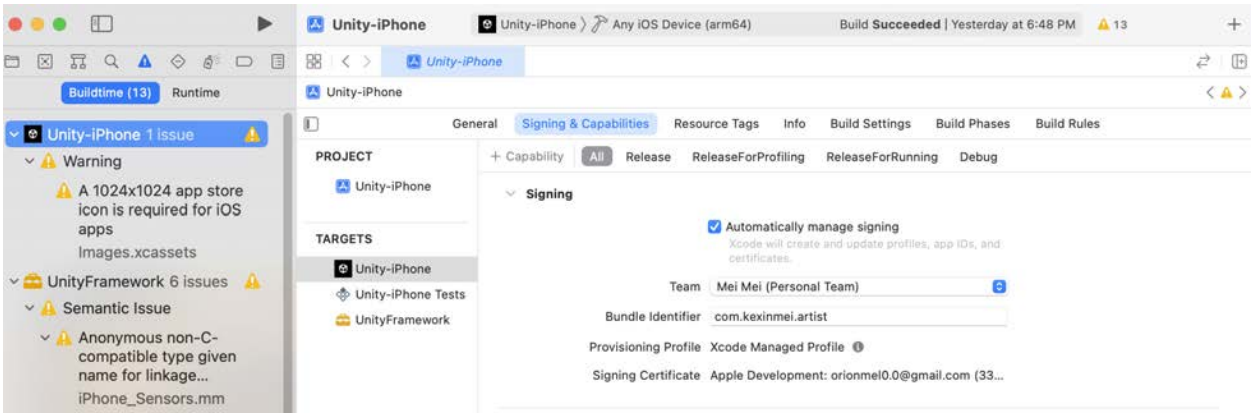
And i want my ball to rotate , i also found the tutorial to help me to let rotate

https://www.youtube.com/watch?v=q_eK7koXnRM



Because i want to run on my iphone, so it is ios system, i need find my ID team and create organization number， so i found the tutorial video

https://www.youtube.com/watch?v=rHjxC9pL3Z8



4.Display of final results

4.1 Two-segment video
